SUPPORT LONE WORKERS & RISKY MISSIONS

K-IP beacons accompany your employees in **isolated work** situations or on **dangerous missions**.
Their positions and movements are visualized in **real time** on a web monitoring platform.
Alarms and notifications are relayed to the Telegram application to be processed efficiently, especially on the field.

Examples:

—— Monitor your ski patrollers during the avalanche prevention plan (firing or explosive transport phases)

—— Secure the snow farmers or the electricians

—— Provide cashiers with an alarm system

The FIND-R allows the avalanche prevention unit to monitor teams and to find a beacon user quickly, even without GPS or network.
